AAUTO'S Landing Page: Implementation Plan

Client: AAUTO'S, Prinses Margrietlaan 5, 2404 HA Alphen aan den Rijn **Current site:** https://aautos.nl (built on the Mobilox dealer platform) **Scope of this document:** the homepage (landing page) of the new website **Language of the site:** Dutch (this plan is in English) **Status:** Draft v1

---

1. Goals

1. Get visitors to **find a car fast** (search is the first thing they see).
2. Build **trust** with real people, real places, and concrete facts instead of generic promises.
3. Turn visits into **leads**: test drive requests, WhatsApp messages, calls, trade-in requests.
4. Look like **one specific Dutch dealership**, not an AI-generated template.
5. Load fast on mobile, where most car shoppers start.

Success measures (to track after launch)

- Share of visitors who use the search bar
- Clicks on WhatsApp, call, and test drive buttons
- Trade-in and finance form submissions
- Mobile page speed (Lighthouse performance 90+)
- Bounce rate on the homepage compared with the old site

---

2. Findings from the current site

Issue	Fix in the new landing page
Opens with a long text block and generic promises	Open with a video hero and search bar
No search or filters on the homepage	Quick search with a live car count
No reviews, team photos, or proof	Google reviews widget, team and showroom section
Car titles are keyword strings from the feed (e.g. "Fiat 500 1.2 Lounge- Panorama- Airco- Nap- Lage Km")	Split into make/model plus highlight chips
Werkplaats appears twice in the navigation	Simplified navigation
Garantie, Verzekeren, Financieren are hidden in a dropdown	Visible services section with real tools
Contact form at the bottom only	Contact and WhatsApp reachable from everywhere
No trade-in tool, no finance calculator, no compare or favorites	Added as widgets
Legal warranty notice is a small popup	Shown clearly in the trust section and footer

Keep: the WhatsApp button, the Mobilox stock data (see section 9), the AutoTrust warranty, and the existing services.

---

3. Design direction: "not AI-generated"

3.1 What to avoid

- Purple, blue, or teal gradients, glowing blobs, glassmorphism
- Three identical icon cards in a row
- Generic headlines ("Find your dream car", "Drive with confidence")
- Stock photos of smiling people handing over keys
- Everything centered with the same rounded corners and soft shadows
- Emoji or generic line icons as decoration
- Copy that could belong to any dealer in any country

3.2 What to do instead

- **Real material first:** real photos and video of the showroom, workshop, owner, team, and cars on the lot.
- **Dutch car-culture details:**
  - The **yellow kenteken (license plate)** as a design element on car cards and car pages.
  - **Spec-sheet / window-sticker styling** for prices and details: tight rows, thin rules, monospaced numerals.
  - Mileage, year, and APK date shown as plain facts.
- **A layout with a point of view:** edge-to-edge photos, tight crops, uneven editorial grids (one large car next to a stack of smaller ones).
- **Typography:** one characterful display font plus a plain, readable body font. Avoid defaulting to Inter for everything.
- **Palette:** warm off-white (paper tone), near-black, and one accent color taken from the AAUTO'S logo. The kenteken yellow is a secondary accent used only on plate elements. No gradients.
- **Motion:** minimal. A slow video hero and small hover states. No parallax, no floating elements, no animated counters.
- **Tone of voice:** specific, short, and human (see section 6).

3.3 Design tokens (to finalize once we have the logo)

Token	Value
Background	Warm off-white, e.g. `#F5F2EC` (to confirm)
Text	Near-black, e.g. `#161616`
Accent	Taken from the AAUTO'S logo (TBD)
Plate yellow	`#F7C600` (approximate, adjust for contrast)
Display font	TBD (one distinctive typeface)
Body font	TBD (clean sans-serif)
Numerals	Monospaced or tabular figures for prices and specs
Corner radius	Small and consistent, or square
Shadows	None or minimal; use thin rules instead

4. Landing page structure

Sections in order from top to bottom.

4.1 Header and navigation

- Logo left. Navigation: **Aanbod**, **Werkplaats**, **Financieren & verzekeren**, **Inruilen**, **Contact**.
- Phone number and a WhatsApp button always visible.
- Sticky on scroll, compact version.
- Mobile: hamburger menu plus a sticky bottom bar with **Bel** and **WhatsApp**.

4.2 Hero (video + search)

- **Background:** looping video that moves from cars outside, through the entrance, past the showroom cars, to the office and team, ending on a car with the logo.
- **Headline:** short and specific (see copy suggestions, section 6).
- **Search bar on top of the video:** make, model, max price, fuel type, with a live count ("34 auto's beschikbaar") and a primary button.
- **Secondary buttons:** "Bekijk alle auto's" and "Plan een proefrit".
- **Overlay:** subtle dark gradient layer only for text readability (not a decorative gradient).

Video specs

Item	Spec
Length	12 to 20 seconds, seamless loop
Shooting	Gimbal or slider, slow movement, golden-hour exterior, bright interior
Format	MP4 (H.264) plus WebM, 1080p max
Size	3 to 5 MB
Behavior	Muted autoplay, no controls, `playsinline`
Poster image	A still frame, shown instantly while the video loads
Mobile	Lighter vertical-cropped video, or poster image only on slow connections or data-saver mode
Accessibility	Respect `prefers-reduced-motion` by showing the poster image only

4.3 Latest arrivals ("Net binnen")

- 6 to 8 car cards, fed from the stock data.
- Layout: editorial grid, with one larger featured car and smaller cards.
- **Card contents:**
  - Large photo (consistent aspect ratio)
  - Make and model as the heading
  - Highlights as small chips (Pano, Airco, Nieuwe APK), split out of the feed title
  - Price in bold, with "vanaf €xxx p/m" estimate
  - Year, kilometers, fuel, transmission in spec-sheet style
  - **Kenteken-style plate** element (design device, see 5.5)
  - Heart icon (favorite) and compare checkbox
- Button: "Bekijk alle auto's".

4.4 Browse by need

- Tiles linking to pre-filtered stock: **Onder €10.000**, **Gezinsauto's**, **Automaat**, **Hybride / Elektrisch**, **Bedrijfswagens** (stock includes vans).
- Each tile shows a real car photo from stock and the live number of matching cars.

4.5 Why AAUTO'S (trust, with concrete facts)

- Replace generic claims with verifiable ones: what is inspected on each car, NAP-checked mileage, APK status, AutoTrust warranty, statutory warranty.
- Presented as a spec-sheet style checklist, not three icon cards.
- Include the **wettelijke garantie** information visibly here (not only in a popup).
- Only publish claims the dealer confirms are true.

4.6 Services row

- Four entries: **Werkplaats**, **Financieren**, **Verzekeren**, **Inruilen**.
- Each has one line of text and one link. Finance and trade-in link to the tools in section 5.

4.7 Reviews

- Google reviews widget (live), with rating and review count.
- Slow-advancing slider, pauses on hover and on touch.
- Link to the Google reviews page.

4.8 Meet the team and showroom

- Real photos of the owner, staff, workshop, and showroom.
- Names and roles. Direct contact ("Bel [naam]").

- Short story: who they are, how long they've been in Alphen aan den Rijn (content from dealer).

4.9 Visit us

- Map, address, opening hours, "Nu geopend / Gesloten" indicator.
- Contact form (name, email, phone, message), plus phone and WhatsApp.
- Route button (opens maps app).

4.10 Footer

- Contact details, opening hours, service links, legal warranty link, privacy policy, cookie settings, KvK number.
- "Mogelijk gemaakt door Mobilox" only if the Mobilox platform is retained.

---

5. Widgets and interactive features

#	Widget	Where	Priority
1	Quick search with live count	Hero	Must
2	Sticky WhatsApp and call button	Site-wide, mobile bottom bar	Must
3	Car cards with favorite and compare	Latest arrivals	Must
4	Google reviews widget	Reviews section	Must
5	Opening hours with "open now" indicator, map	Visit us	Must
6	Finance calculator (price, down payment, term)	Car cards and services	Should
7	Trade-in form ("Wat is uw auto waard?") with license plate lookup	Services and its own page	Should
8	Test drive booking (car, date, time)	Hero, car pages	Should
9	Compare cars (2 to 3 side by side)	From cards	Could
10	Recently viewed cars	Below fold, returning visitors	Could

Slider rules

- No full-page auto-rotating hero slider.

- Featured cars: 4 to 6 max, arrows plus swipe.
- Reviews: slow auto-advance, pause on interaction.
- Lazy-load all images below the fold.

Widget design rules

- One accent color for every button and widget.
- Large touch targets (at least 44 px).
- Maximum 3 or 4 widgets visible per screen.

5.5 The kenteken (license plate) element

- A small yellow plate component showing the car's license plate or a short label.
- Used on car cards and car pages as the signature visual device.
- Must have sufficient text contrast and should not imitate a real plate in a misleading way (use a styled, non-official look).

---

6. Copy and tone

Principles

- Specific over generic. Short sentences. Dutch, direct, and friendly.
- Name people and facts. No filler paragraphs.
- Every claim must be true and confirmed by the dealer.

Starter copy (to be confirmed with the dealer)

Spot	Draft (Dutch)
Hero headline	"Occasions uit Alphen. Eerlijk geprijsd."
Hero subline	"Elke auto gecontroleerd. Kom gerust langs voor een proefrit."
Search button	"Toon 34 auto's" (number is live)
Latest arrivals heading	"Net binnen"
Trust heading	"Wat we controleren voordat een auto online komt"
Trade-in heading	"Wat is uw auto waard?"
Team CTA	"Vragen? Bel [naam] of stuur een WhatsApp."
Contact heading	"Kom langs"

Replace the current phrase "Zorgvuldig geselecteerde occasions" with concrete statements once the real inspection process is known.

---

7. Technical plan

7.1 Architecture decision (open)

Option	Pros	Cons
A. Keep Mobilox, custom front end	Stock stays in sync automatically, less work	Depends on Mobilox API or feed access
B. Replace Mobilox with own site	Full design and technical freedom	Must build and maintain the stock import (feed from Mobilox, AutoScout24, or similar)

Recommendation: start with Option A if Mobilox provides API or feed access, since the redesign effort should go into the experience, not the plumbing. Confirm access before development starts.

7.2 Suggested stack (to confirm after the decision above)

- Static-first front end (e.g. Astro or Next.js) with a small API layer for stock, forms, and booking.
- Image CDN with automatic resizing and WebP/AVIF.
- Forms to email and to a lead inbox (and optionally WhatsApp notification).
- Admin: dealer staff manage cars through the existing stock system, not through the website code.

7.3 Data

- Stock feed fields needed: make, model, variant, price, year, mileage, fuel, transmission, body type, color, photos, options list, license plate, APK date.
- A parsing step to **split feed titles** into model plus highlight chips.
- Cache stock data and refresh on a schedule (e.g. every 15 minutes).

7.4 Performance

- Target: LCP under 2.5 s on mobile, CLS under 0.1.
- Video poster first, video deferred; lazy-load below-the-fold images; self-host fonts with `font-display: swap`; keep JavaScript small.

7.5 SEO

- Individual URLs for each car, clean titles and meta descriptions.

- `LocalBusiness` and `AutoDealer` structured data (address, hours, phone, reviews).
- `Vehicle` / `Product` structured data on car pages.
- Local keywords: "occasions Alphen aan den Rijn", "auto kopen Alphen".
- Google Business Profile aligned with the site (same name, address, phone).

7.6 Accessibility and compliance

- WCAG 2.1 AA: contrast, keyboard navigation, alt text, focus states, reduced-motion support.
- GDPR (AVG): cookie consent, privacy policy, consent on forms.
- Display the statutory warranty information and price transparency as required in the Netherlands.

---

8. Content and asset checklist

From the dealer (needed before design is finalized)

- [ ] Logo (vector) and brand colors
- [ ] Real photos: exterior, showroom, workshop, team, owner
- [ ] Permission and schedule for the **video shoot**
- [ ] Opening hours, KvK number, phone, WhatsApp, email
- [ ] What is actually inspected on each car (for the trust section)
- [ ] Warranty details (AutoTrust and statutory)
- [ ] Finance and insurance partner details and legal wording
- [ ] Google Business Profile access (for reviews)
- [ ] Names and roles of team members
- [ ] Access to Mobilox feed or API

Video shoot plan

1. Exterior cars at golden hour, slow push-in along the lot.
2. The sign and entrance, walking in.
3. Glide past showroom cars.
4. Office and team (with consent).
5. Final shot: one car with the logo.

- Shoot horizontal for desktop and a vertical version for mobile.

---

9. Phases and timeline (suggested)

Phase	Work	Duration
0. Discovery	Confirm Mobilox access, collect logo, content, and permissions	1 week
1. Shoot and assets	Video and photo shoot, edit, compress	1 to 2 weeks (parallel with 2)
2. Design	Moodboard, homepage mockup (desktop and mobile), review with dealer	1 to 2 weeks
3. Build	Front end, stock integration, widgets, forms	2 to 3 weeks
4. Content and SEO	Dutch copy, structured data, redirects from old URLs	1 week
5. Test	Devices, speed, accessibility, form delivery, stock sync	1 week
6. Launch	DNS switch, redirects, monitoring, Search Console	1 week
7. After launch	Review analytics and adjust	Ongoing

Total estimate: **about 6 to 9 weeks**, depending on shoot scheduling and Mobilox access.

10. Risks and open questions

Risk or question	Mitigation or next step
Mobilox may not offer API or feed access	Ask early; fall back to Option B with a feed import
Real photos and video may be delayed	Start with the best phone photos; design layouts that work with them
Feed titles are inconsistent	Build a title parser and allow manual overrides
Unverified trust claims	Only publish what the dealer confirms
Heavy video hurting speed	Strict compression, poster fallback, mobile version
Lead handling after launch	Agree who answers WhatsApp and forms, and how quickly
Old URLs losing rankings	Create a redirect map from the current site

Open questions

1. Will the dealer keep Mobilox, or replace it?
2. What are the logo colors and brand rules?
3. Is there existing photo or video material we can use?
4. Which finance and insurance partners should the calculator and forms use?
5. Who is responsible for responding to leads and keeping stock photos up to date?

11. Definition of done (landing page)

- [ ] Video hero plays smoothly with poster fallback on mobile
- [ ] Search bar filters stock and shows live counts
- [ ] Latest arrivals pull from the live stock with cleaned titles
- [ ] Reviews widget shows live Google reviews
- [ ] WhatsApp, call, test drive, and trade-in actions work and reach the dealer
- [ ] Open/closed indicator is correct
- [ ] Lighthouse mobile: Performance 90+, Accessibility 95+, SEO 95+
- [ ] Structured data validates
- [ ] Cookie consent and privacy requirements met
- [ ] Redirects from old URLs tested
- [ ] Dealer sign-off on copy, photos, and all trust claims
